AMENDMENTS TO THE CLAIMS

This listing replaces all prior versions and listings of claims in the application.

- 1-8. (Canceled)
- 9. (Currently Amended) A purification method for separating minicells from parent bacterial cells that comprises (a) providing a sample enriched for minicells, wherein said minicells are approximately 0.4 µm in diameter, (b) subjecting said sample to a condition selected from the group consisting of a stress-inducing osmotic condition, an anaerobic condition and a nutrient-limiting condition, which condition induces parent bacterial cells to adopt a filamentous form, and then (c) filtering said sample with at least one filter having a pore size of about 0.45 µm, such that minicells but not filamentous parent bacterial cells pass, whereby said method yields a purified composition of minicells free of parent bacterial cells.
 - 10. (Canceled)
- 11. (Original) A method according to claim 9, wherein said sample is incubated in a hypertonic medium.
 - 12-26. (Canceled)
- 27. (Previously Presented) A method according to claim 9, wherein the filtering step comprises cross-flow filtration.
- 28. (Previously Presented) A method according to claim 9, wherein the filtering step comprises a serial filtration process that combines cross-flow filtration and dead-end filtration.
- 29. (Previously Presented) A method according to claim 28, wherein the filtering step employs at least one filter employing a pore size less than or equal to about $0.2 \mu m$.
 - 30. (Canceled)

- 31. (Previously Presented) A method according to claim 28, wherein said serial filtration process is preceded by differential centrifugation.
- 32. (Previously Presented) A method according to claim 9, wherein the filtering step employs at least one filter employing a pore size less than or equal to about 0.2 µm.
 - 33. (Canceled)
- 34. (Previously Presented) A method according to claim 9, further comprising a step of subjecting the minicells to density gradient centrifugation in a biologically compatible medium.
- 35. (Previously Presented) A method according to claim 34, further comprising a step of subjecting the minicells to differential centrifugation.
- 36. (Previously Presented) A method according to claim 34, wherein said medium is isotonic and non-toxic.
- 37. (Previously Presented) A method according to claim 34, wherein said medium consists essentially of iodixanol and water.
- 38. (Previously Presented) A method according to claim 9, further comprising a step of treating said purified composition of minicells with an antibiotic.
- 39. (Previously Presented) A method according to claim 9, further comprising a step of removing free endotoxin from said purified composition of minicells.
- 40. (Previously Presented) A method according to claim 39, wherein said step of removing free endotoxin employs anti-Lipid A antibodies.
- 41. (Previously Presented) A method according to claim 9, wherein the purified composition of minicells contains fewer than about 1 contaminating parent bacterial cell per 10⁸, 10⁹, 10¹⁰ or 10¹¹ minicells.

- 42. (Previously Presented) A method according to claim 9, wherein the purified composition of minicells contains fewer than about 1 contaminating parent bacterial cell per 10⁹ minicells.
- 43. (Previously Presented) A method according to claim 9, wherein the purified composition of minicells contains fewer than about 1 contaminating parent bacterial cell per 10¹⁰ minicells.
- 44. (Previously Presented) A method according to claim 9, wherein the purified composition of minicells contains fewer than about 1 contaminating parent bacterial cell per 10¹¹ minicells.
